Faizan Khan

SOFTWARE DEVELOPER

PROFILE

I'm Faizan Khan, a passionate Web Developer with a strong focus on front-end technologies, UI/UX design, and modern JavaScript features. I enjoy building responsive, user-friendly websites and experimenting with animations to create smooth and engaging user experiences.
I'm also expanding my skills in backend development using PHP, MySQL, and JavaScript frameworks, aiming to grow into a full-stack developer. I love solving real-world problems through clean code, optimized performance, and thoughtful design.

B.E - 7.0 CGPA

PROJECTS

Smart TaskFlow Manager
A full-stack task management app that lets users create, update, and track tasks with priority levels. Includes authentication, responsive UI, and real-time progress updates.

TQuickChat Real-Time Messenger
A real-time chat application built with websockets for instant messaging. Supports typing indicators, online status, and private/group conversations.

ShopSense Recommendation Engine
A machine-learning based system that recommends products using user behavior and similarity algorithms. Helps improve user engagement through personalized product suggestions.
